**DETAILED ACTION**

1. According to paper filed on May 27, 2008, the applicants have canceled claim 22 and furthermore, have amended claims 1, 3-6, 9, 15, 23 and 24. The applicants have also submitted a new abstract.
2. Claims 1-21 and 23-25 are now pending in the application.

***Response to Arguments***

3. Applicant's arguments with respect to claims 1-21 and 23-25 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1-21 and 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gaullier ( U.S. Patent 6,242,603 ).

Gaullier discloses a process for preparing lysergic acid by isomerizing paspalic acid in the presence of metal hydroxide ( see col. 2, lines 45-63 ). The process described by Gaullier meets all the limitations of instant claims except that it does not mention the amounts of paspalic acid and metal hydroxide to be present in amounts to cause a phase separated reaction mixture. However, there is no comparative data present demonstrating unexpected results of either superior yield or purity by using phase separated reaction mixture. Therefore, in absence of some unexpected results of either superior yield or purity of the instant process over the process of Gaullier, it would have been obvious to one skilled in the art to prepare lysergic acid by isomerizing paspalic acid in the presence of metal hydroxide with reasonable expectation of success.
